DOOR RELEASE TOUCH SENSOR

Purpose

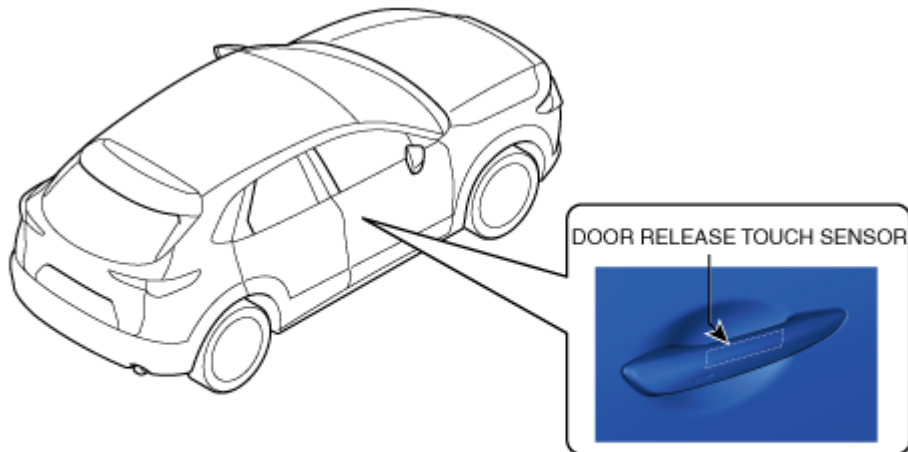

- Transmits the touch sensor operation of the user to the LF control unit.

Function

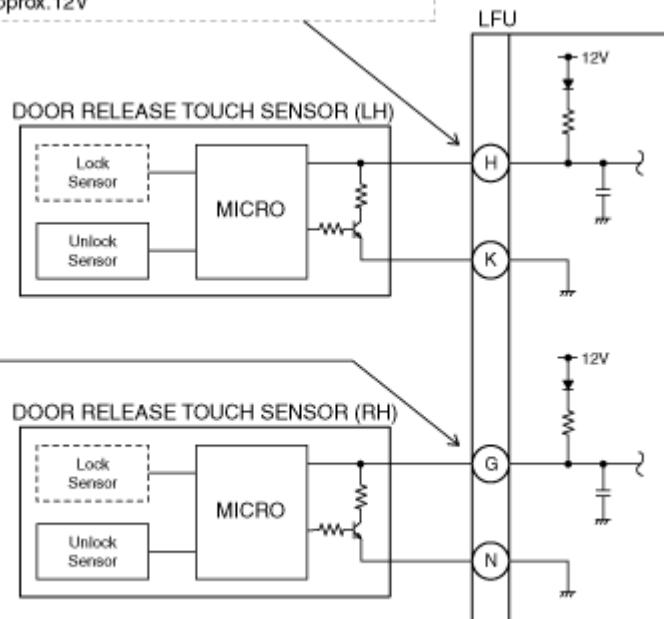

- The door unlock signal is sent to the LF control unit by touching the touch sensor.

Construction, Operation

- Installed on the outer handle of the driver-side/passenger-side front door.
- When a capacitance change is detected by touching at the unlock area of the touch sensor, an output unlock signal is sent to the LF control unit.

Touched : approx.12V ---> approx.6V ---> approx.12V (repeat)
 Not touched : approx.12V
